

ROKKAM RAJA

Software Test Engineer | Manual & Mobile QA | API Testing | Automation (Selenium) | AI-Assisted Testing

+91 83743 12812 | rajarokkam02@gmail.com | linkedin.com/in/rokkam-raja-b312391aa | Kurnool, Andhra Pradesh

PROFESSIONAL SUMMARY

QA Engineer with 1+ year of experience testing web and mobile applications across healthcare staffing and workforce management domains (**NurseIO**, **ShiftWorx**, **CoreVerify**). Skilled in Manual Testing (Functional, Regression, Smoke, **UAT**, **E2E**), **REST API** testing (**Postman**), cross-browser/cross-platform testing (**BrowserStack**, **TestFlight**), **SQL**-based backend validation, and foundational **Selenium/Java** automation. Active user of AI tools (**ChatGPT**, **Claude**) to accelerate test design and defect analysis. Strong in **Agile/Scrum**, **Jira** defect management, and release validation.

CORE SKILLS

Manual Testing: Functional, Smoke, Sanity, Regression, Integration, System, **UAT**, **E2E**, Exploratory, Negative, Boundary Value, Usability, Compatibility

Mobile Testing: **Android & iOS** (native/responsive), **BrowserStack App Live**, **TestFlight**, push notifications, interruption, install/update/network testing

API Testing: **REST APIs** with **Postman** — collections, environments, HTTP methods, status codes, **JSON** schema validation, positive/negative scenarios

Automation: **Selenium WebDriver**, **Java**, **TestNG**, Page Object Model (**POM**), **XPath/CSS** locators — foundational

AI-Assisted Testing: **ChatGPT & Claude** for test case/scenario generation, edge-case identification, test data creation, defect report drafting

Database: **SQL** queries for backend data validation — joins, filters, data accuracy checks (**MySQL**)

Tools: **Jira**, **Postman**, **BrowserStack**, **TestFlight**, **MS Excel** (RTM/test cases), **Git** basics, **Chrome DevTools**

Methodologies: **SDLC**, **STLC**, **Agile/Scrum**, Bug Life Cycle, Requirement Traceability Matrix (**RTM**), Severity/Priority, Test Reporting

PROFESSIONAL EXPERIENCE

Junior Software Tester — TMIX Info Soft Pvt Ltd

May 2025 – Present

TMIX Info Soft Pvt Ltd | Hyderabad, Telangana, India

- Designed 150+ test cases per release cycle for web and mobile applications across 3 platforms (**NurseIO**, **ShiftWorx**, **CoreVerify**), covering functional, regression, smoke and **UAT** scenarios.
- Executed 500+ test cases across 8+ release cycles; maintained a defect detection rate of 95%+ in pre-release phases through thorough regression and smoke testing.
- Logged and managed 80+ defects in **Jira** with clear reproduction steps, severity/priority tagging and evidence; achieved a reopen rate below 10% through detailed defect documentation.
- Reduced test case design time by ~30% by leveraging AI tools (**ChatGPT/Claude**) for test scenario generation, edge-case identification and test data creation.
- Performed cross-browser testing (Chrome, Firefox, Safari, Edge) on Windows/macOS and mobile testing (**Android/iOS**) on 10+ device configurations using **BrowserStack** and **TestFlight**.
- Validated **REST APIs** using **Postman** across 3 platforms — verified request/response, status codes, **JSON** schema and negative scenarios for 40+ API endpoints.
- Executed **SQL** queries against **MySQL** databases for backend data validation — verified data accuracy, joins and field-level consistency for test scenarios.
- Participated in **Agile/Scrum** ceremonies across 8+ sprints; published daily/weekly test execution and defect summary reports to the team.

PROJECTS

NurseIO

Healthcare Staffing Platform — QA / Testing Resource

NurseIO is an on-demand healthcare staffing marketplace that connects healthcare facilities with credentialed HCPs (Healthcare Professionals) for shift-based work. As part of the QA team, I owned end-to-end test coverage for the shift lifecycle, HCP onboarding, credential/compliance checks, **GPS**-based attendance, and the payment/payout pipeline across the Admin, Facility and HCP roles. The platform's real-money payouts and location-based clock-in logic made accuracy and edge-case coverage especially critical, so testing combined functional validation with close attention to failure paths, timing edge cases, and cross-role data consistency across the full shift journey from posting to completion.

- Tested end-to-end shift lifecycle (creation → broadcast → assignment → completion) across Admin, Facility and HCP roles; validated **GPS**/geofence-based clock-in/out and timesheet generation.
- Executed mobile testing on **iOS** via **TestFlight** and on **Android/iOS** real devices via **BrowserStack**; validated push notifications, SMS/email alerts and in-app messaging.
- Verified HCP onboarding, document upload/compliance workflows and payment/payout calculations including failure and edge cases.
- Performed **REST API** validation (**Postman**) and **SQL** backend checks (**MySQL**); designed and maintained regression suites across releases.

Environment: Web (Chrome, Firefox, Safari, Edge / Windows, macOS), **Android & iOS**, **TestFlight**, **BrowserStack**, **Jira**, **Postman**, **MySQL**, **Agile/Scrum**

ShiftWorx

Workforce & Shift Management Platform — QA / Testing Resource

ShiftWorx is a workforce management application used by managers and staff to handle scheduling, shift swaps, attendance tracking and payroll-ready reporting. My testing focus was on the scheduling engine and its many conflict scenarios — overlapping shifts, swap approvals, **NFC/QR** check-ins and behavior under offline or poor-network conditions — since these directly affected payroll accuracy and staff trust in the system. I worked closely with AI tools to systematically generate edge cases for complex scheduling conflicts that would have been easy to miss through manual test design alone, then validated the underlying data through API and **SQL** checks to confirm timesheets and overtime calculations stayed accurate under real-world conditions.

- Tested shift scheduling, swap/offer workflows, **NFC/QR**-based check-in and offline/poor-network behaviour for Manager and Staff roles.
- Validated payroll-ready timesheet exports, overtime calculations and notification triggers; executed cross-browser/OS regression on **BrowserStack**.
- Used AI tools to generate edge cases for complex scheduling conflict scenarios; performed API testing (**Postman**) and **SQL** data validation.

Environment: Web + **Android/iOS**, **BrowserStack**, **TestFlight**, **Jira**, **Postman**, **MySQL**, **Agile/Scrum**

CoreVerify

Credential & Compliance Verification Module — QA / Testing Resource

CoreVerify is the credential and compliance verification module integrated with **NurseIO**, responsible for gating shift eligibility based on a healthcare professional's document status. Because a failure here could let an unqualified or non-compliant worker onto a shift, testing emphasized negative and adversarial scenarios: invalid, expired and tampered documents, **OCR** misreads, and edge cases around renewal and expiry timing. I also validated the API integration between **CoreVerify** and **NurseIO** to confirm that compliance status was correctly reflected in shift eligibility in real time, and used **SQL** to verify audit trails for every approval/rejection decision, ensuring a defensible compliance record.

- Tested document upload (camera/file), **OCR**-read data verification, approval/rejection workflows and expiry/renewal alerts.
- Validated API integration with **NurseIO** (shift eligibility based on compliance status); performed negative testing for invalid/expired/tampered documents and verified audit trails via **SQL**.

Environment: Web, **REST APIs** (**Postman**), **Jira**, **MySQL**, **BrowserStack**

EDUCATION

B.Tech, Computer Science & Engineering — Rajeev Gandhi Memorial College of Engineering and Technology
